ABSTRACT
The concept of wisdom education emphasizes the generation of students’ wisdom, which happens in teaching practice. Teachers arouse the original thoughts and knowledge base. Then students start the learning process of conception, discovery, choice, induction, and evaluation, and as a result, achieve the ability enhancement of creative thinking ability and problem-solving. Under the guidance of wisdom education, the micro-course design ought to effectively promote students’ experience in one or several stages of the intelligent learning process. It is suggested that students participate in and complete specific tasks to encourage students to experience the entire learning process. This article used various case explanation, mainly discussed how to design smart micro-course tasks that promote students’ wisdom generation and develop students’ thinking.
